Dear Hiring Manager,

I am excited to submit my application for the Site Reliability Engineer position. With over three years of specialised experience at Akamai Technologies, I have built a proven track record of driving automation, reliability, and operational excellence in large-scale, mission-critical environments directly aligning with your team's focus on modernising complex systems and championing SRE best practices.

In my current role as Site Reliability Engineer II, I have led multiple cross-functional initiatives to automate infrastructure provisioning, optimize CI/CD pipelines, and deploy robust observability solutions. My work has resulted in a 50% reduction in manual operations, a 75% improvement in deployment times, and a 30% reduction in system downtime. I have hands-on expertise in Python, Linux shell scripting, and configuration management with Ansible as well as deep experience with monitoring and telemetry tools including Otel, Grafana, and ELK Stack.

I am eager to bring my automation-first mindset, technical depth, and collaborative spirit to your SRE team, helping to ensure the availability, reliability, and scalability of your platforms.

Thank you for considering my application.

Best Regards,

Rajath Jaiprakash
Site Reliability Engineer 2
